Has your organization thought about introducing Lean into your company or your Lean program not been as effective as you had hoped? Lean has become much more than merely focusing on the elimination of waste and implementing point solutions. It is about building a sustainable culture that will thrive and, in the process of doing so, eliminate waste. This significant distinction is changing the way Lean is being taught and executed to obtain the best results.

This new continuous improvement paradigm guarantees a equal return on your investment of time, material and money by shifting to “purpose driven activity”. By setting a holistic and well-defined course into the future and through daily PDCA iterations, one ensures the right things are done at the right time for the right reason.

AEDC-MS will be presenting a weeklong Lean Boot Camp series to teach you how all of the different “tools and concepts” come together to form a cohesive approach to continuous improvement.

The components of the program include the following:

- Introduction to Lean and Toyota Kata
- Lean Management System
- Value Stream Mapping
- 8 Step Problem Solving
- 5S/Visual/Workplace Organization
- Standards and Training Within Industry
- Team building and Culture
- Quick Changeover

By presenting materials and simulations in an interactive and iterative manner, participants will come to understand how to approach their own “Transformational Journey” in ways that affect the optimum desired outcome. By increasing “depth” within an organization, the Lean Boot Camp provides a unique opportunity for companies to further develop the capabilities of the company as well as its up and coming and existing Leadership. Together, they can make a substantial difference when pursuing continuous improvement initiatives.
